Egm item news

egmtech introduce new landscape lights

EGMtech is developing exterior architectural lighting. The lighting to be introduced this time is RGB lighting which is the most used product in exterior architectural lighting. First, it has brightness and performance suitable for use in bridges and buildings, as in the image above.

With the first exterior architectural lighting project in Korea EGMtech decided to apply an RGB BAR product as same image above to a lake in Korea.

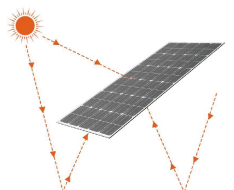

The 5700K color BAR is installed on the upper part of the fence for safe walking, and the RGB BAR is installed on the lower part for aesthetic sense.

egmtech introduce solar street lights

EGMtech launched a solar street light that can efficiently receive solar energy. In addition to basic functions, transparent panel technology is used to increase charging efficiency by more than 20% compared to other companies' existing products.

The most efficient use area is expected to be near the equator. Because it is possible to charge even the light reflected from the floor.
